

AGILE & SCRUM FOUNDATIONS

Abstract: One of the most common points of Agile adoption failure comes with the incremental on-boarding of Agile teams throughout an organization while not having everyone starting with the same foundational Agile knowledge. This workshop session is designed to help everyone on the team learn the fundamental principles behind what makes Agile work, and allows them to participate in several real world exercises. This structure allows everyone on the team to learn the 'Why' behind the 'How', and gives everyone a chance to leave with the tools needed to effectively do their job better. This is a mandatory prerequisite to any Advanced Agile training session. This course is has been approved and is offered as a Scrum Alliance Registered Education Agile Foundations Course.

Audience: This session is designed for both new Agile teams learning the ropes and experienced agile teams who are trying to re-align or get started on the same agile footing while establishing an internal Agile Center of Excellence. This workshop is often coupled with Agile Coaching in order to increase the effectiveness and impact.

Duration: Two Days.

Class Size: Up to 25 Students may register.

- **Identify and understand each role in the Agile Process.**
- **Obtain a common understanding of Agile Principles and why they are important; specifically, how adhering to the Agile principles will help teams achieve the desired benefits.**
- **Transition to a customer oriented, rather than technology oriented, approach to product delivery and release. Focus on Outcome not Output.**
- **Appreciate the best practices from a variety of Agile methodologies and how they can be incorporated together to establish the best processes for your team and organization.**
- **Build a consistent cadence for your team throughout product development and delivery.**
- **Understand the AgileDad 12 Step Agile Implementation worksheet and identify what additional work is needed to achieve next steps towards Agile Excellence**
